

# Wind and solar projects to lower your energy costs and reduce your carbon footprint

WE FUND THE PROJECT, YOU  
GET LOWER ENERGY RATES

eternax solar

**ETERNAX SOLAR LLC** provides low cost renewable solar PV and wind energy power to its customers through a PPA.

## HISTORY

Both Eternax Solar LLC and its sister company Target Technology Company ([www.targettechnology.com](http://www.targettechnology.com)) were founded by Mr. Han Nee. The latter was founded in 1998 based on the invention of a corrosion resistant silver alloy thin film material for optical discs (DVD's). This solution replaced a very expensive pure gold film used due to its corrosion resistance given such a thin layer (less than 30 atoms thick for the silver alloy).

Today in 2010, Target Technology dominates the market for this material supplying its sputtering targets worldwide directly and through its Licensees. The company holds 30-plus patents around the world.

Target Technology Company also provides sputtering targets to the solar Photovoltaic (PV) cell manufacturing industry giving our engineering team strong insight into the Solar PV material market.

# PROJECTS

Eternax Solar LLC develops projects based on Solar photovoltaics (PV) and on wind turbines. In January 2010, Eternax Solar signed its first commercial contract to install a 355 kWp solar PV farm in Cochise County , Arizona.

# PROPOSAL

## We fund the project, you get lower energy rates

Eternax Solar will analyze your energy needs for your commercial site and the available wind or sun resource. Based on this and on your current energy rates a suitable Power Purchase Agreement (PPA) will be offered including such considerations as:

-  Suitable system size for your energy consumption (typically we consider Solar PV sized from 100kW+ to 1MW)
-  Eternax funds the project (and owns the generating facility)
-  Lower energy cost than you currently pay to your utility
-  Length of PPA contract (typically 25-years solar, 20-years wind)
-  Any system buyout conditions
-  Eternax either directly or through a suitable sub-contractor operates and maintains the installation so you have no risk

**You only pay for the energy produced**

# BENEFITS TO THE CUSTOMER

-  No out of pocket expenses for you
-  You pay less than your current rates for your energy
-  No technical risk for you, no production and you do not pay
-  Operation and maintenance are our responsibility
-  You reduce your company's carbon footprint
-  Our interests are aligned to maintain a high quality system to maximize uptime
-  No wrestling with navigating Federal, State and County regulations
